## SUMMARY

Computer Science graduate and aspiring software engineer with hands-on experience in full-stack web and mobile app development, and growing expertise in blockchain technologies. Passionate about building scalable, efficient applications and contributing to innovative software projects.

## SKILLS

**Languages:** C, Java, JavaScript, Kotlin, Python, Rust, Solidity, SQL, TypeScript

**Technologies & Tools:** Anchor, AngularJS, Appwrite, Bootstrap, Docker, Ethereum, ExpressJS, Figma, Git, Github, NodeJS, MongoDB, Postman, React, React Native, Smart Contracts, Solana, Supabase, TailwindCSS, Vercel, Web3.js

## WORK EXPERIENCE

UniCredit — *Web Developer (Freelance)*

Apr 2026

- Developed and deployed a responsive corporate website using Next.js, React, and modern web technologies.
- Implemented server-side rendering (SSR) and optimized page performance for improved SEO and user experience.
- Managed deployment, testing, and maintenance of the website.

Aoctolabs, Web3 Startup — *Front-End Developer (Intern)*

Oct 2024 – Nov 2024

- Developed and deployed responsive UIs using ReactJS and Tailwind CSS, ensuring cross-device compatibility.
- Collaborated with the team to translate requirements into performant, interactive features.

## EDUCATION

Government Engineering College, Wayanad

Nov 2022 – May 2026

B.E. in Computer Science and Engineering

CGPA: 7.71

Relevant Coursework: Object Oriented Programming, Databases, Discrete Maths, Data Structures and Algorithms, Operating Systems, Computer Networks, Image Processing, Distributed Computing, Network Security Protocols

## PROJECT WORK

- **EXPNX:** Built a Kotlin Android personal finance tracker app with an automated background SMS parser for zero-friction expense logging, architected on MVVM with Jetpack Compose and Room. Integrated real-time AI-driven analysis across spending patterns, budgets, goals, and bills.
- **Rusty-Type:** Published a Rust terminal typing-test game to crates.io featuring raw terminal control, multi-threaded timer logic, and character-by-character rendering — zero external UI frameworks. Implemented real-time keystroke handling, colored feedback and custom word-count modes.
- **Tip.sol:** Built a Solana-based mobile tipping app using React Native (Expo), enabling instant, low-fee creator payments. Implemented secure wallet integration via Solana Wallet Adapter and handled end-to-end on-chain transactions.
- **Journal.sol:** Engineered a fully on-chain journaling dApp on Solana (Anchor + Next.js) with granular public/private entry visibility controlled by smart contracts — 100% of user data stored on-chain with no centralized backend.
- **ChatApp:** Shipped a cross-platform React Native + Expo chat app with Supabase real-time messaging and auth, supporting concurrent users with sub-second message delivery and a fully responsive UI.

## LEADERSHIP & COMMUNITY

- **Founder, Web3Enclave:** Founded the first blockchain-focused technical club in our college, recruiting members, defining curriculum, and running workshops and tech talks that attracted **100+ attendees** across Solana development, smart contracts, and DeFi fundamentals.
- **Volunteer, Web3Kerala:** Active contributor to one of Kerala's leading blockchain communities, supporting developer outreach, event coordination, and knowledge-sharing initiatives that strengthen the regional Web3 ecosystem.
